Step 3: Go to the Location Editor page	24
Step 4: Reply to the comment	24
Step 5: Update the location	24

Section 1: Introduction

The County of Los Angeles GIS Program is developing a single, comprehensive geographic database of locations countywide. The scope of this information is broad, including locations of services, points of interest, physical features, to name a few.

In order to provide the most authoritative source of locations, the goal of this initiative is that maintenance of the information will be done by the jurisdiction (city, department, agency) that provides the service.

A web-based Location Management System (<http://egis3.lacounty.gov/lms>) will provide a single place to maintain this information. An instruction manual for this application is part of this document.

A standard set of information about each location will be maintained and accessed by agencies and the public through all of the applications and maps that the County develops. Examples include:

- The County's service locator (<http://maps.lacounty.gov>);
- The County's GIS Viewer (<http://egis2.lacounty.gov/gisviewer>).

Agencies will also be able to access the data directly through geographic tools, other related Geographic Information Systems (GIS) software, and data downloads.

Information collected

The standard information collected for each service location will include:

1. Location Name
2. Type of service(s) offered at the location (e.g. the service categories).
3. Description of the location, including programs and services offered at the location.
4. Geo-location (x, y coordinates) for showing services on maps.
5. Name of the agency/jurisdiction that provides services at the location.
6. Location Address.
7. Contact Phone number(s).
8. Service Hours.
9. Email contact information.
10. Web site URL.
11. Additional Information as applicable
12. The External Identification number if the location came from another system
13. The Source of the Information

Ownership

Each service location will be maintained by the relevant agency/city (the "owner"). The owner of a service location will have a unique login, and will only be able to make changes to service locations for which they are responsible. Other agencies can suggest changes or make comments about the

information shown on a service location, and these will be emailed to the owners to make changes as necessary.

If an owner cannot be determined, the County will maintain the service location with existing resources until an owner can be determined.

The County will maintain the list of categories and sub-categories. If additional categories are needed, the County will add them.

Maintenance

The County has configured an off-the shelf web-based application that will make updating service information easy. This system is accessible from any web browser and will not require specialized software. The County will oversee the system, and ensure that the application and database will be available to service location owners.

The web-based software includes the following capabilities:

1. Web-based maintenance tools.
2. Access control which limits the ability to update a service location to authorized users.
3. E-mail subscription to updates and additions.
4. Maintenance via mobile devices (updating via iPhone or Droid apps).
5. Public comment capabilities (only if approved through the County moderator) which send emails to data owners of update requests.
6. Automatic RSS feed for syndication into other websites.
7. Flexible search capabilities.

Current Categories

The current list of categories and sub-categories are listed below. This list will be updated as necessary.

CAT1	CAT2	CAT3	Count	FOUO

Location Management System

Instruction Manual

Section 1: Contributor

This section is for users who provide comments and suggestions for changes and additions to the Location Management System. As a contributor, you do not own location content and are not responsible for ensuring that it is accurate, but your comments are critical for letting location owners know that something is incorrect, or that a location is missing.

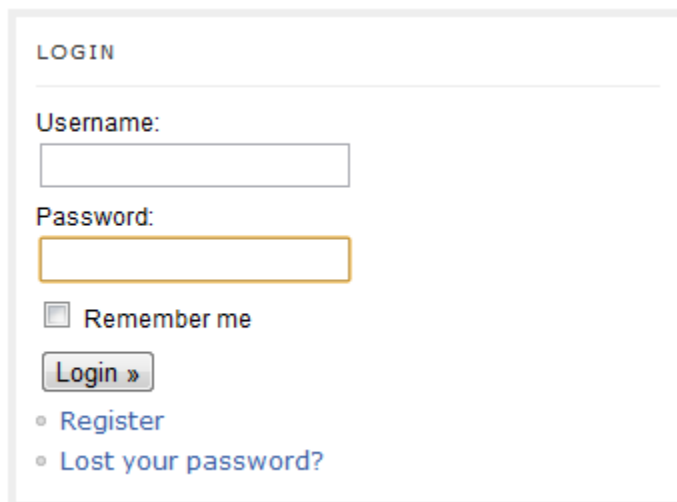

The Location Management System streamlines the communication between you and the owner of a location. Your comments will automatically be sent to the owners, and their responses will automatically be sent back to you (and other contributors to a location as well).

Your comments will help ensure that the locations in the database are kept up to date – you are very important!

Part 1: Registering/Logging in for the first time

Note for County employees

The Location Management System (LMS) uses the County's Common Employee Directory to validate County employees and provide single sign-on capabilities. If your department provides this information to the Common Employee Directory, use your employee ID number and related password. Generally this is the same one that that you use for your internet connection.

The screenshot shows a login interface with the following elements:

- LOGIN**: A header label at the top of the form.
- Username:**: A text label followed by a rectangular input field.
- Password:**: A text label followed by a rectangular input field.
- ☐ **Remember me**: A checkbox with the text "Remember me" to its right.
- Login »**: A button with the text "Login" and a right-pointing arrow.
- [Register](#): A blue hyperlink.
- [Lost your password?](#): A blue hyperlink.

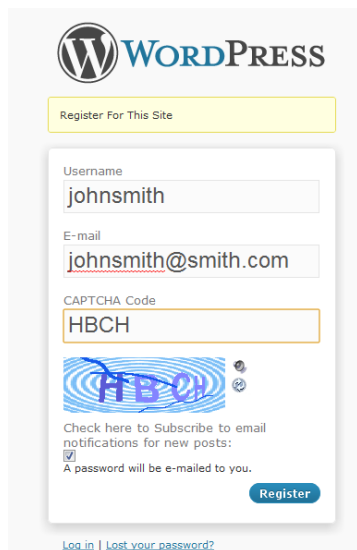

If you are not part of the Common Employee Directory – don't worry – you can register separately.

Registration for non-County staff

If you are not a County employee, or are not in the Common Employee Directory, you can still make suggestions, but you will first need to register with the LMS.

Step 1: Click the “Register” link.

A page will appear, where you can type in your username and your email address. A sample is shown to the left.

A screenshot of the WordPress registration form. At the top is the WordPress logo and the text "Register For This Site". Below this is a form with fields for "Username" (containing "johnsmith"), "E-mail" (containing "johnsmith@smith.com"), and "CAPTCHA Code" (containing "HBCH"). There is a CAPTCHA image showing the letters "HBCH" in a blue, wavy font. Below the CAPTCHA is a checkbox labeled "Check here to Subscribe to email notifications for new posts:" which is checked. A note below the checkbox says "A password will be e-mailed to you." At the bottom right of the form is a blue "Register" button. At the bottom left are links for "Log in" and "Lost your password?".

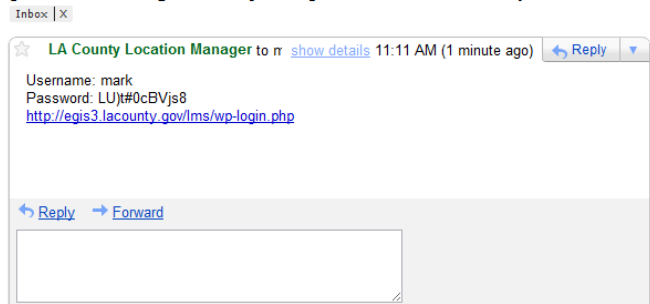

Step 2: Click “Register” button

A screenshot of the WordPress login form. At the top is the WordPress logo and the text "Registration complete. Please check your e-mail." Below this is a form with fields for "Username" and "Password". There is a "Remember Me" checkbox and a blue "Log In" button. At the bottom left are links for "Register" and "Lost your password?".

A new page will note that your registration is complete.

Step 3: Confirm your email address

[Location Management System] Your username and password

A screenshot of an email confirmation message. The header says "Inbox | X". The email is from "LA County Location Manager" to "mark" with a link to "show details" and a timestamp of "11:11 AM (1 minute ago)". The body of the email contains the text: "Username: mark", "Password: LUjt#0cBVjs8", and a URL "http://egis3.lacounty.gov/lms/wp-login.php". At the bottom are links for "Reply" and "Forward", and a large empty text box for a response.

Once you click the “register” button, a password is emailed to you. This confirms that your email address is valid, and is the way the system will communicate changes to you.

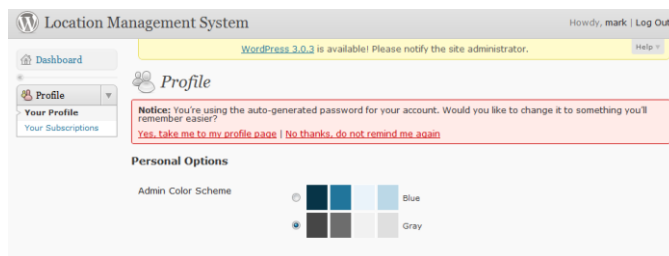

A sample email is shown to the left. Click on the link in the email, or type it in the browser.

The image shows the WordPress login page. At the top is the WordPress logo. Below it is a login form with two input fields: 'Username' containing the text 'mark' and 'Password' with masked characters. There is a 'Remember Me' checkbox and a 'Log In' button. At the bottom, there are links for 'Register' and 'Lost your password?'.

You will be taken back to the login page, where you need to enter in your username and the supplied password.

Step 4: Change your password.

The image shows the WordPress 'Profile' page. It has a sidebar with 'Dashboard', 'Profile', 'Your Profile', and 'Your Subscriptions'. The main content area has a 'Profile' header, a notice about the auto-generated password, and a 'Personal Options' section with 'Admin Color Scheme' (Blue and Gray options).

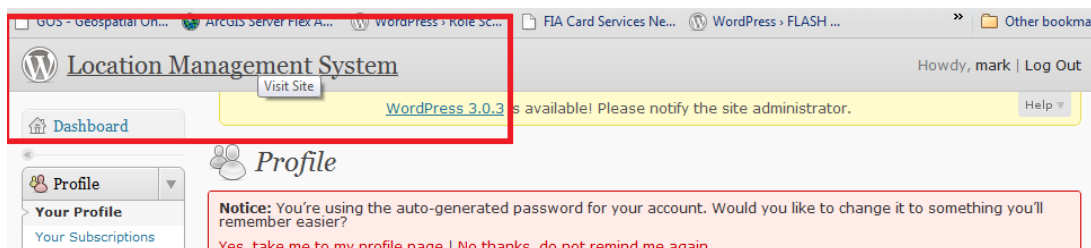

Once you have logged in, you will be shown your profile page. The “New Password” section is at the bottom of the page. Enter in your preferred password twice and click “Update Profile.” Your new password is now set.

The image shows the 'New Password' section of the WordPress profile page. It includes a text input for the new password, a hint about password strength (at least seven characters, using upper and lower case letters, numbers, and symbols), and an 'Update Profile' button.

Step 5: Return to the Location Management System

To return to the home page you can click on the link at the top of the page.

The image shows the 'Location Management System' dashboard. It has a sidebar with 'Dashboard', 'Profile', 'Your Profile', and 'Your Subscriptions'. The main content area has a 'Profile' header, a notice about the auto-generated password, and a 'Personal Options' section. A red box highlights the 'Visit Site' link at the top of the page.

Part 2: Suggesting Changes to existing Locations

Suggesting changes are very easy in the Location Management System. Any comments/suggestions made in the comment section will automatically be sent to the owner of that location. They will review the comment and make changes as necessary.

If you are the real owner of a location, we invite you to take over the location, and become its owner! That is covered in Section 2.

Step 1: Search for a location

In general, a direct link from a map or other web application will most likely take you directly to the location you are interested in. But you can also search for locations within the system.

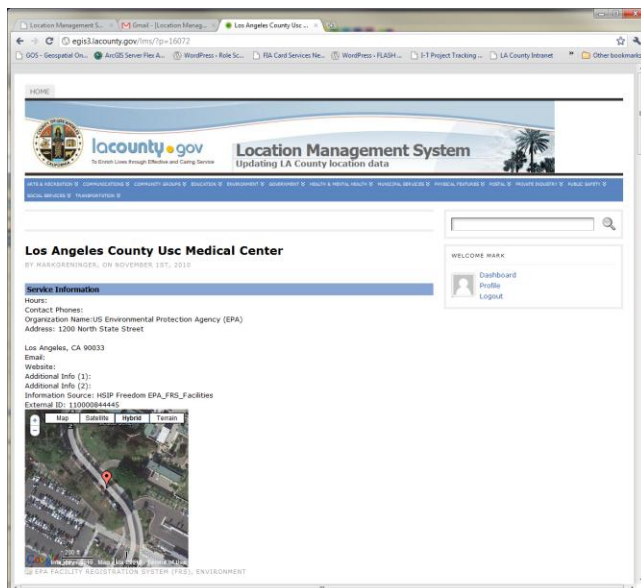

A search box is always available on the right side of the LMS application:

You can type in any search phrase. The application will return any matching locations.

Step 2: Open the details

The name of the location is a link to the detailed information about that location. A detailed view will include a map of the location:

Step 3: Enter suggested changes

Below the map you will find a box where you can enter suggestions. The more detailed the suggestion the better. An example is below.

Make sure that the checkbox next to “Notify me of followup comments via e-mail” is checked. It will make it much easier for the owner of the location to communicate with you.

EPA FACILITY REGISTRATION SYSTEM (FRS), ENVIRONMENT

Logged in as [mark](#). [Logout »](#)
You can use [these HTML tags](#)

Please capitalize "USC". The location that you have also isn't on the main hospital - please move it to its location on Marengo Street

☒ Notify me of followup comments via e-mail

Submit Comment

What happens after you enter a comment?

The owner of the information will receive an email notifying them of your comment:

Your email address is included, so they can respond directly to you if there are questions. In general, if there aren't any questions, the owner will comment directly back to you from the LMS editor. You will receive an email with their response.

 **LA County Location Manager** to me

December 13, 2010 at 11:47 am · [Reply](#) · [Edit](#)

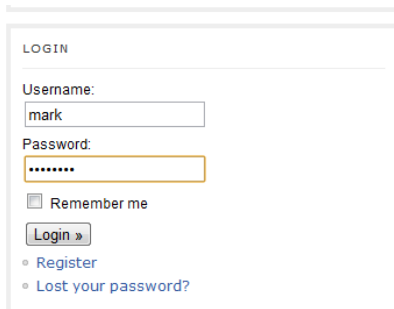

Thank you – the changes have been made!

The power of subscribing to the comments is that if other users also comment on a location, you will be notified of their comments as well.

Part 3: Adding New Locations

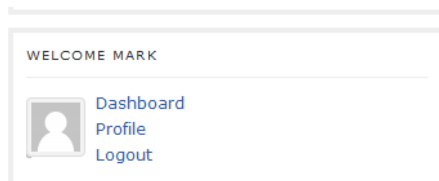

If you find that there is a missing location, the Location Management System will allow you to create a new location. It will be need to be reviewed and approved to ensure completeness and accuracy by an appropriate topic moderator before final publication.

Step 1: Login to the System

A screenshot of a login form titled "LOGIN". It contains a "Username:" label with a text input field containing "mark", a "Password:" label with a password input field containing "*****", a "Remember me" checkbox, a "Login »" button, and two links: "Register" and "Lost your password?".

If you have completed the registration in Part One, please login using the login entry on the right side of the screen.

Enter your username and password, then click the “Login” button

A screenshot of a user dashboard titled "WELCOME MARK". It features a user profile icon and three links: "Dashboard", "Profile", and "Logout".

You will see the login entry change to show your name.

Step 2: Go to the Dashboard

A screenshot of the WordPress login form. It features the WordPress logo and the text "WORDPRESS". Below this is a "Username" label with a text input field containing "mark", a "Password" label with a password input field containing "*****", a "Remember Me" checkbox, a "Log In" button, and two links: "Register" and "Lost your password?".

Click on the “Dashboard” link. A current bug means that you need to re-enter your username and password on the following screen:

We are working to resolve this.

Please re-enter your username and password and click “Log In”.

You are taken to the dashboard for the application.

Step 3: Create a New Location (“Post”)

Because the engine for the Location Management System is a blog platform called Wordpress, it defaults to considering new content posts. Each “post,” for our purposes, is a location.

To begin creating a new location/post, click the “New Post” link in the top bar:

Step 4: Add Location Information

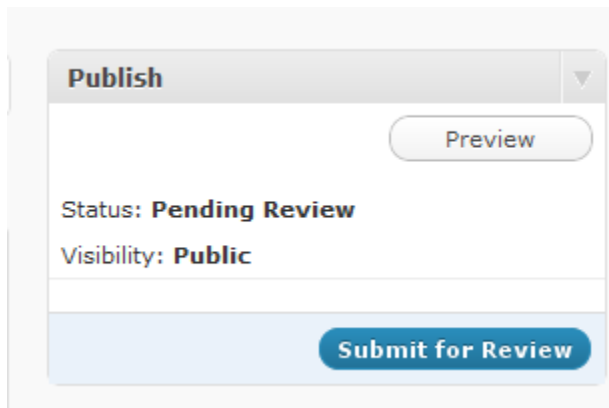

There are a number of locations to enter information. Most of them are fairly self-explanatory. Entries marked with a * are required.

- 1) **Location Title*** – the name of the location.
- 2) **Location Description** – a text description of the location. You can enter any information that you feel is important to understanding the services provided at this location or description of the location.
- 3) **Location Details** – Various standard pieces of information, including hours, phone numbers, address, and contact information
- 4) **WP Geo Location*** – this is the real latitude/longitude of this location, which is how this location will actually get on a map (as opposed to the address). Type in an address or point of interest, and click “Search.” If the location isn’t correct, you can click and drag the icon to its proper location.
- 5) **Category*** - The category or categories that describe the location.

A sample entry is shown on the next page for the Montrose Harvest Market. Here are the defaults:

- 1) Montrose Harvest Market
- 2) Some text about the market
- 3) I have added the hours (Sunday mornings), phone numbers, and the address. I found the website online and added that.
- 4) For the location, I typed in 2200 Honolulu Ave, 91020, and then moved the location icon to the middle of the block.
- 5) I selected “Farmers Market” for the category.

Step 5: Submit for Review

The screenshot shows a 'Publish' panel with a dropdown arrow on the right. Inside the panel, there is a 'Preview' button. Below the button, the status is 'Status: Pending Review' and the visibility is 'Visibility: Public'. At the bottom of the panel is a large blue button labeled 'Submit for Review'.

When you have finished creating your draft, click on “Submit for Review” which is at the top right of the entry area.

An email will be sent to the appropriate category owner who will review the entry and either approve it or let you know if there are any issues.

Section 2: Location Owners

The County is looking for location owners! The more we can share the responsibility for keeping locations up to date, the better our information will be!

Location owners are responsible for keeping one or more locations up to date. You will receive comments and suggestions from other users of the system, review those comments and respond to them, and keep the information about your locations up to date. Your work helps to make the Location database a valuable resource for County staff and all of the users of the data.

As a location owner, you have the ability to do the following:

- 1) Create new locations.
- 2) Update existing locations.

You have responsibilities too! These are:

- 1) Keep your locations up to date.
- 2) Respond to comments and suggestions, and in a professional manner (please ☺).

To become the owner of one or more locations, please contact the County's GIS team (or the Geographic Information Officer):

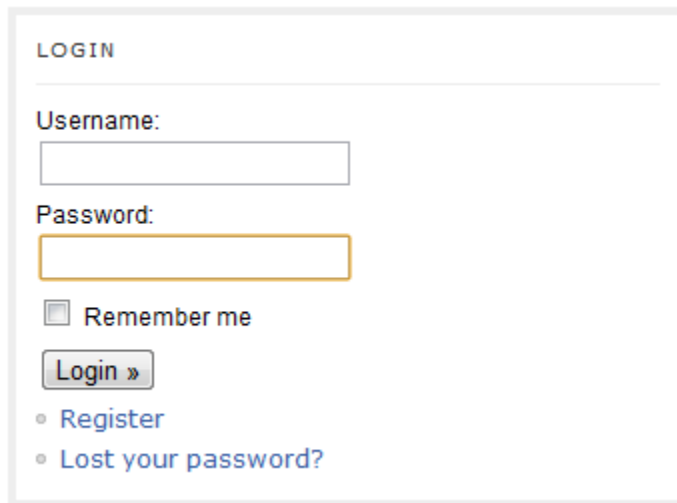

Mark Greninger

mgreninger@cio.lacounty.gov

Part 1: Registering/Logging in for the first time

Note for County employees

The Location Management System (LMS) uses the County's Common Employee Directory to validate County employees and provide single sign-on capabilities. If your department provides this information to the Common Employee Directory, use your employee ID number and related password. Generally this is the same one that that you use for your internet connection.

A screenshot of a web form titled "LOGIN". It contains a "Username:" label followed by a text input field. Below that is a "Password:" label followed by a text input field. Under the password field is a checkbox labeled "Remember me". Below the checkbox is a button labeled "Login »". At the bottom are two links: "Register" and "Lost your password?".

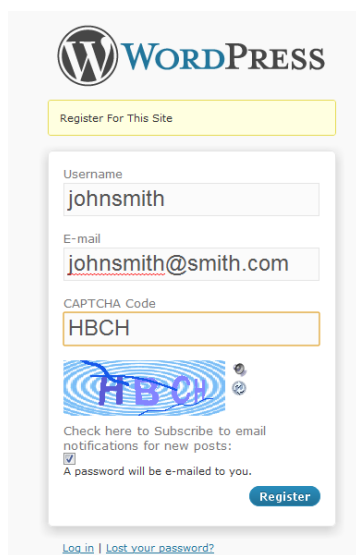

If you are not part of the Common Employee Directory – don't worry – you can register separately.

Registration for non-County staff

If you are not a County employee, or are not in the Common Employee Directory, you can still make suggestions, but you will first need to register with the LMS.

Step 1: Click the "Register" link.

A page will appear, where you can type in your username and your email address. A sample is shown to the left.

A screenshot of a WordPress registration form. At the top is the WordPress logo and the text "WORDPRESS". Below it is a yellow box that says "Register For This Site". The form itself has fields for "Username" (with the sample "johnsmith"), "E-mail" (with the sample "johnsmith@smith.com"), and "CAPTCHA Code" (with the sample "HBCH"). Below the CAPTCHA field is a checkbox for "Check here to Subscribe to email notifications for new posts:" which is checked. Below that is a note: "A password will be e-mailed to you." At the bottom right of the form is a blue "Register" button. At the very bottom of the page are links for "Log in" and "Lost your password?".

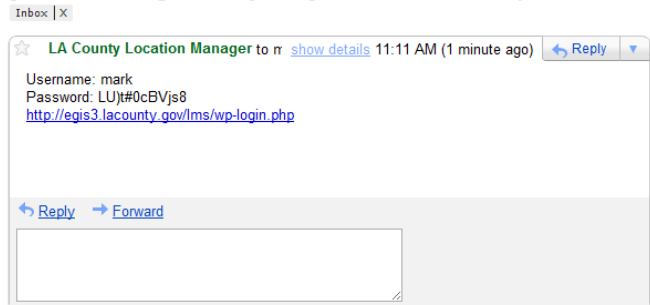

Step 2: Click “Register” button

A new page will note that your registration is complete.

Step 3: Confirm your email address

[Location Management System] Your username and password

Once you click the “register” button, a password is emailed to you. This confirms that your email address is valid, and is the way the system will communicate changes to you.

A sample email is shown to the left. Click on the link in the email, or type it in the browser.

You will be taken back to the login page, where you need to enter in your username and the supplied password.

Step 4: Change your password.

Once you have logged in, you will be shown your profile page. The “New Password” section is at the bottom of the page. Enter in your preferred password twice and click “Update Profile.” Your new password is now set.

Step 5: Return to the Location Management System

To return to the home page you can click on the link at the top of the page.

Part 2: Have locations assigned to you, and become an owner.

Please contact the County's enterprise GIS Group. Once you have registered, they will give you the additional rights by making you a location owner. You can let them know which locations you will be responsible for. You may take responsibility for:

- 1) A location category (Farmer's Markets).
- 2) Locations in a specific area (All locations in the City of San Marino).
- 3) Locations in an area in a specific category (All Parks in the City of Los Angeles).

The system administrators will work with you to find the relevant locations and assign them to you.

Now it's on to the fun part:

- 1) Suggesting changes to other locations.
- 2) Updating your locations.
- 3) Adding new locations.
- 4) Responding to comments on your locations.

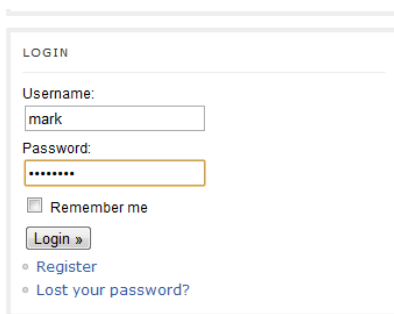

Part 3: Suggesting Changes to existing Locations (not yours)

As a location owner, you can only update information on locations that you own. You can still suggest changes to any other location as if you were a contributor.

Part 4: Updating your locations

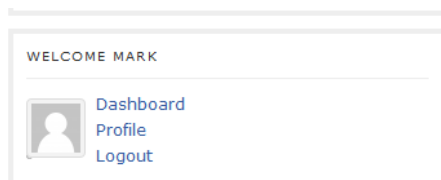

Updating your locations is surprisingly easy.

Step 1: Login to the System

A screenshot of a web application's login page. The page has a title "LOGIN" at the top. Below it, there are two input fields: "Username:" with the text "mark" and "Password:" with a masked password "*****". Below the password field is a checkbox labeled "Remember me". At the bottom left is a "Login »" button. Below the button are two links: "Register" and "Lost your password?".

Login using the login entry on the right side of the screen.

Enter your username and password, then click the "Login" button

A screenshot of a web application's dashboard after a successful login. The page has a title "WELCOME MARK" at the top. Below it, there is a user profile icon on the left and a list of links on the right: "Dashboard", "Profile", and "Logout".

You will see the login entry change to show your name.

Step 2: Find your location(s)

As discussed in the section for contributors, a direct link from a map or other web application will most likely take you directly to the location you are interested in. But you can also search for locations within the system.

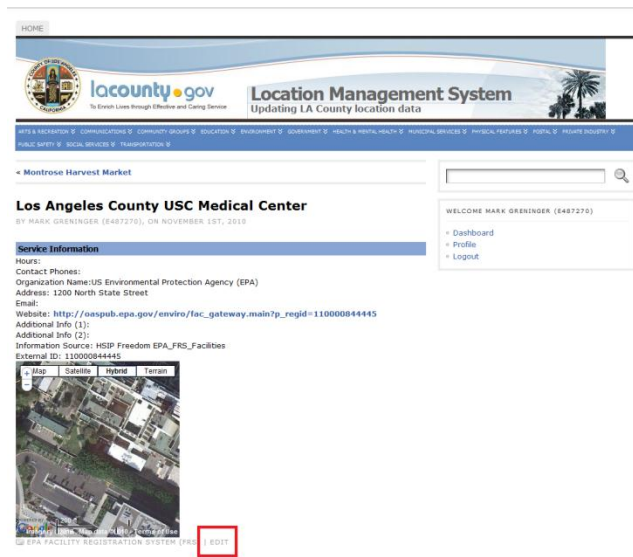

A search box is always available on the right side of the LMS application:

You can type in any search phrase. The application will list any matching locations.

Step 3: Open the details

The name of the location is a link to the detailed information about that location. As in Section 1, the detailed view will include a map of the location, ***with a major difference***:

You will now see an “Edit” link at the bottom of the detailed information. Seeing this link will let you know that you “own” this location. Congratulations 😊

Step 4: Click the “Edit” Link

The edit link will take you to the editor, where you can update the information about this location. The next page shows this page.

Step 5: Update Location Information

Where necessary, update the information to ensure its accuracy. Entries marked with a * are required.

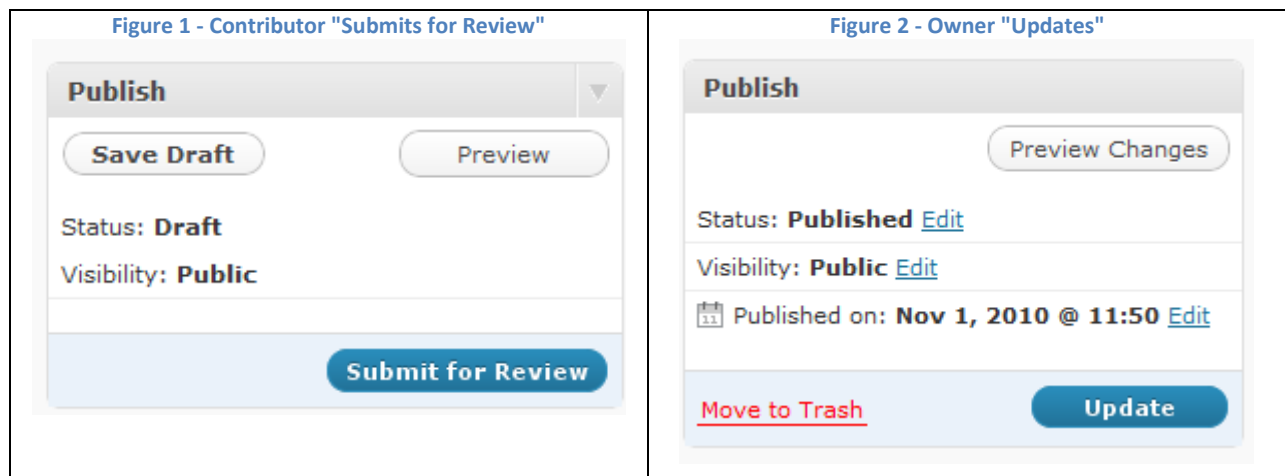

- 1) **Location Title*** – the name of the location.
- 2) **Location Description** – a text description of the location. You can enter any information that you feel is important to understanding the services provided at this location or description of the location.
- 3) **Location Details** – Various standard pieces of information, including hours, phone numbers, address, and contact information
- 4) **WP Geo Location*** – this is the real latitude/longitude of this location, which is how this location will actually get on a map (as opposed to the address). Type in an address or point of interest, and click “Search.” If the location isn’t correct, you can click and drag the icon to its proper location.
- 5) **Category*** - The category or categories that describe the location. Locations can one or more categories as appropriate.

You can click on “Preview Changes” if you want to see the changes before you publish.

Step 6: Publish Update

The major difference between this page and the page seen by a contributor is the change in publication type - from “Submit for Review” to “Update.”

As soon as you click “Update” – the update is published! Remember – you are the owner, so you choose!

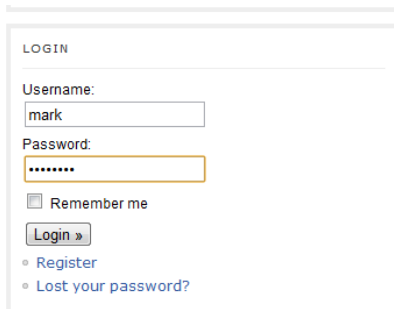

Part 5: Adding New Locations

If you find that there is a missing location, the Location Management System will allow you to create a new location. As a location owner, you can go right to publishing – no need to review.

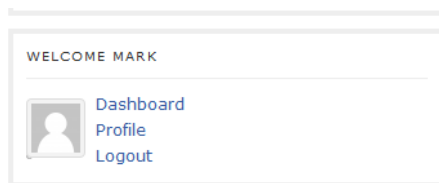

The instructions below are identical to the instructions for a contributor, except that you can publish directly – no need to “submit for review.”

Step 1: Login to the System

If you have completed the registration in Part One, please login using the login entry on the right side of the screen.

Enter your username and password, then click the “Login” button

You will see the login entry change to show your name.

Step 2: Go to the Dashboard

Click on the “Dashboard” link. A current bug means that you need to re-enter your username and password on the following screen:

We are working to resolve this.

Please re-enter your username and password and click “Log In”.

You are taken to the dashboard for the application.

Step 3: Create a New Location (“Post”)

Because the engine for the Location Management System is a blog platform called Wordpress, it defaults to considering new content posts. Each “post,” for our purposes, is a location.

To begin creating a new location/post, click the “New Post” link in the top bar:

Step 4: Add Location Information

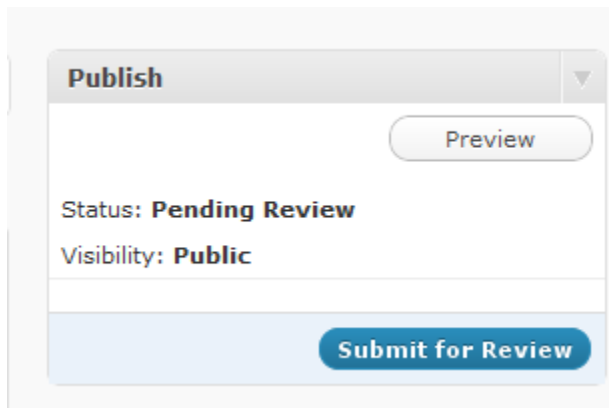

There are a number of locations to enter information. Most of them are fairly self-explanatory. Entries marked with a * are required.

- 6) **Location Title*** – the name of the location.
- 7) **Location Description** – a text description of the location. You can enter any information that you feel is important to understanding the services provided at this location or description of the location.
- 8) **Location Details** – Various standard pieces of information, including hours, phone numbers, address, and contact information
- 9) **WP Geo Location*** – this is the real latitude/longitude of this location, which is how this location will actually get on a map (as opposed to the address). Type in an address or point of interest, and click “Search.” If the location isn’t correct, you can click and drag the icon to its proper location.
- 10) **Category*** - The category or categories that describe the location.

A sample entry is shown on the next page for the Montrose Harvest Market. Here are the defaults:

- 6) Montrose Harvest Market
- 7) Some text about the market
- 8) I have added the hours (Sunday mornings), phone numbers, and the address. I found the website online and added that.
- 9) For the location, I typed in 2200 Honolulu Ave, 91020, and then moved the location icon to the middle of the block.
- 10) I selected “Farmers Market” for the category.

Step 5: Submit for Review

The screenshot shows a 'Publish' panel with a dropdown arrow on the right. Inside the panel, there is a 'Preview' button. Below the button, the status is 'Status: Pending Review' and the visibility is 'Visibility: Public'. At the bottom of the panel is a large blue button labeled 'Submit for Review'.

When you have finished creating your draft, click on “Submit for Review” which is at the top right of the entry area.

An email will be sent to the appropriate category owner who will review the entry and either approve it or let you know if there are any issues.

Part 5: Responding to comments/suggestions

From time to time, you may receive comments about your locations. These are suggestions from contributors that may have new or updated information about one or more of your locations.

Step 1: The email

Comments will arrive in your email inbox, and contain some information about the user who submitted the comment, the text of the comment, and a couple of links to move you to the next phase. Here are the important parts of the email:

- 1) The name and email address of the person who made the comment.
- 2) The comment – here it is “Test comment”
- 3) Links to immediately assign the comment to the trash or to spam.
- 4) Link to access the page in the Location Management System

If you feel the comment is appropriate, click on the link to move to updating the entry.

Step 2: Log in to the Location Management System

A screenshot of the 'LOGIN' form for the Location Management System. It includes a 'Username:' field with the value 'mark', a 'Password:' field with masked characters '*****', a 'Remember me' checkbox, a 'Login »' button, and links for 'Register' and 'Lost your password?'.

Enter your username and password on the right side of the screen.

Step 3: Go to the Location Editor page

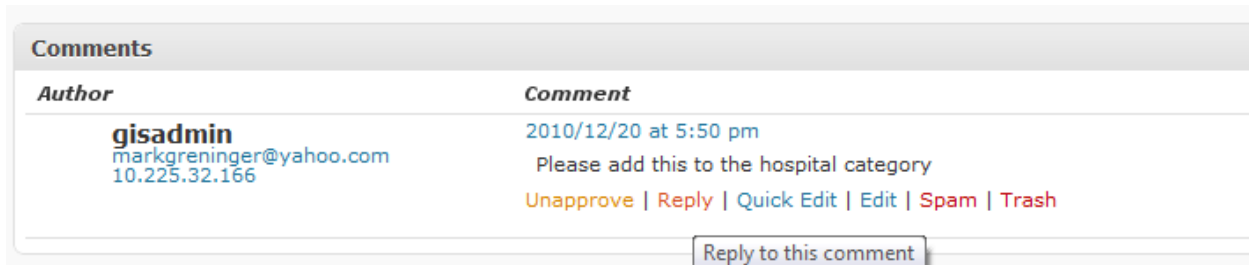

Click on the “Edit” link under the map to go to the editor. You will see the same page you saw when you were updating a site.

Step 4: Reply to the comment

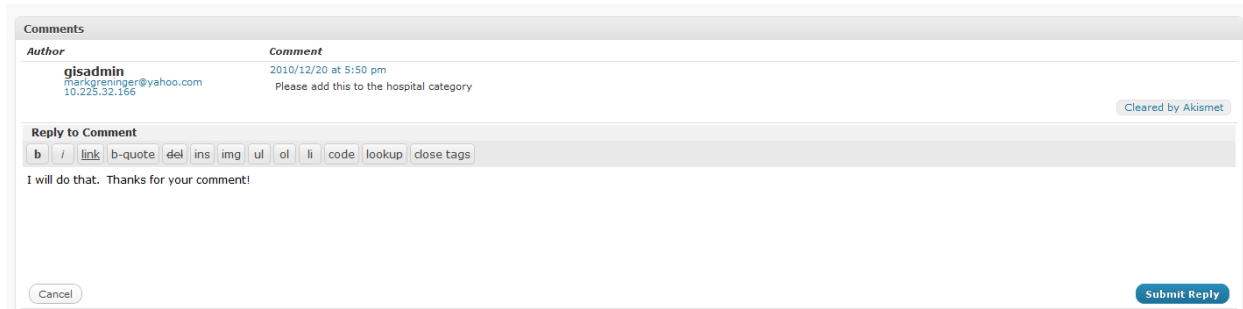

Location owners have a section called “Comments” where they can see and respond to comments. If you hover your mouse over the comment, you will see a number of options appear:

- Unapprove – if you feel the comment was not appropriate, you can unapprove it.
- Reply – Reply to the comment (more below)
- Quick edit – edit the comment
- Spam – this was spam
- Trash – put the comment in the trash.

Unless you have some issues with the comment, click on “Reply” to reply to the comment.

A new box will open, where you can type your reply.

Type in your reply, then click the “Submit Reply” button.

Your response will be posted on the details page for the location, and be sent back to the original commenter.

Step 5: Update the location

Go ahead and update the location information as discussed in Part 4: Updating Locations. When you are done, click the “Update” button. Done!
